Tornado & Severe Thunderstorm Outlook Friday, September 29, 2017

National Weather Service
Storm Prediction Center
<http://www.spc.noaa.gov>

Hazardous Weather

We will continue to see a chance for thunderstorms on Friday. A few storms could be strong to severe. In addition these thunderstorms will be capable of producing very heavy rain. Isolated flash flooding will also be possible. High temperatures will continue to run below average.

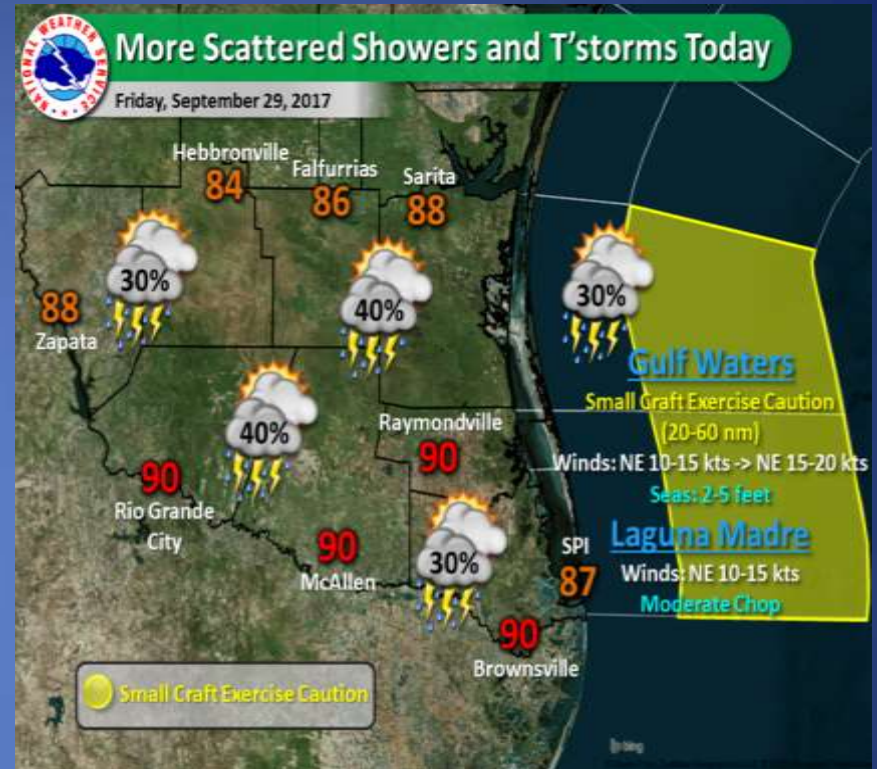

Skies will be mostly cloudy again today with chances of showers and isolated thunderstorms mainly along and west of the Interstate 35 corridor. Highs will range from around 70 degrees west to the mid 80s southeast with northeast winds 5 to 10 mph

Hazardous Weather

Most areas should remain dry this morning. However, scattered showers and isolated thunderstorms may develop again this afternoon...especially across inland areas. Mostly cloudy skies will also be common (cloudier across the Brush Country). Afternoon highs will be in the 80s area wide with NE winds prevailing.

Scattered showers and thunderstorms, under mostly cloudy skies, will be expected once again today across the Rio Grande Valley and the rest of deep south Texas. Any of the heavier or slower-moving thunderstorms will have the ability to produce nuisance flooding in poorly-draining and low-lying areas. High temperatures will range from the middle 80s across the ranchlands to near 90 degrees for the valley. Mariners should expect moderate to fresh northeast breezes this afternoon with a moderate chop across the bay and gulf seas of 2 to 5 feet. Small craft exercise caution on the offshore gulf waters from 20 to 60 nautical miles out today

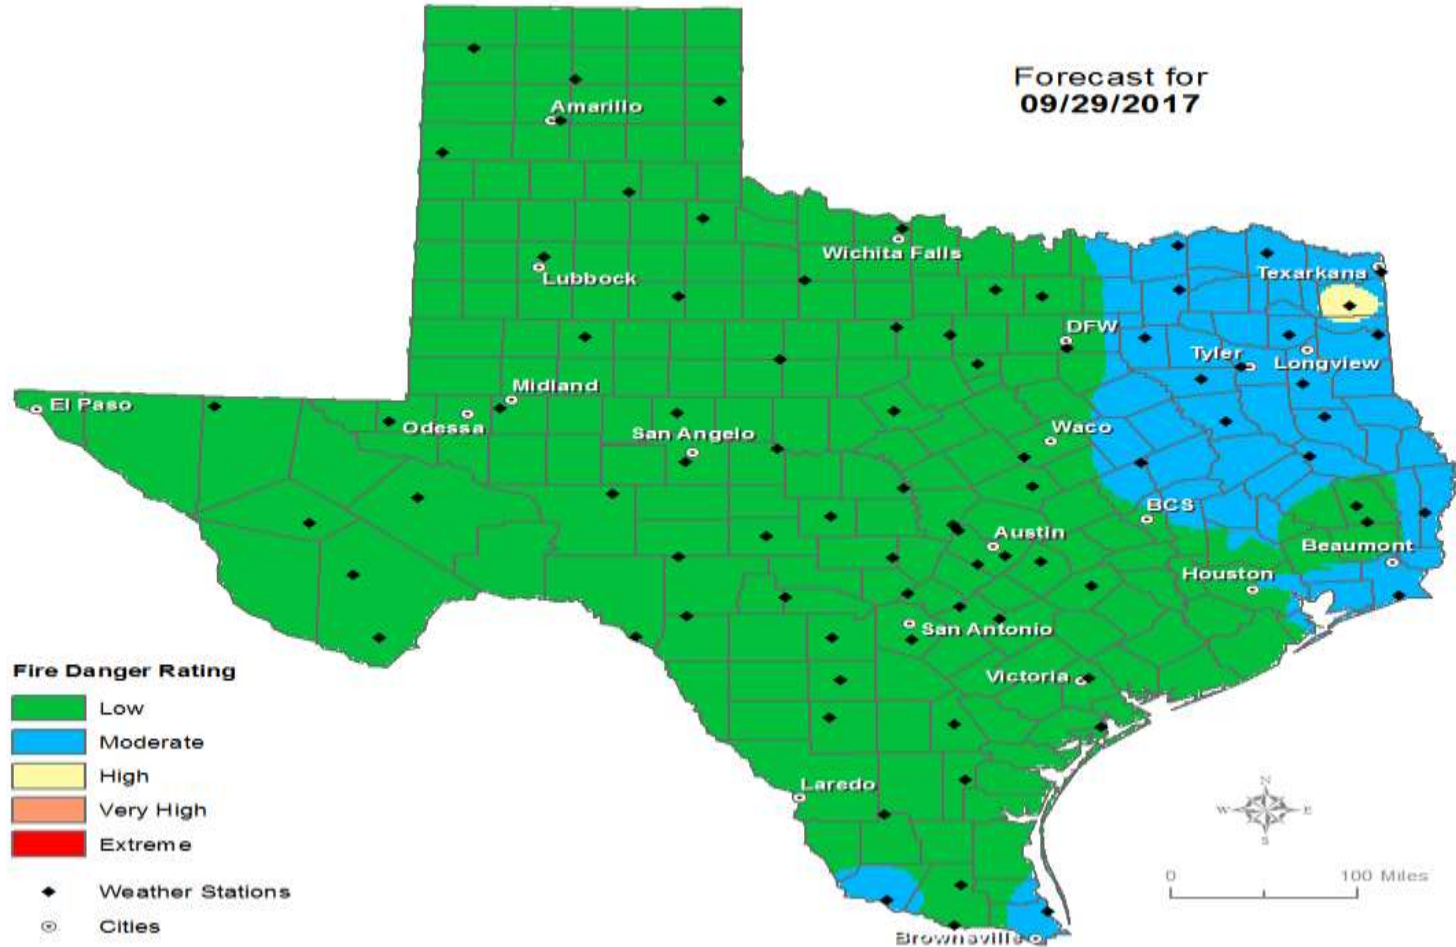

Weather Warning/Advisories Issued

DATE	WARNING TYPE	LOCATION
09/28/17	Flood Warning	Bell, Falls, Milam, and Navarro Counties; Nueces River in La Salle County; Rio Grande in El Paso County
